

1 extension

2 first dimension

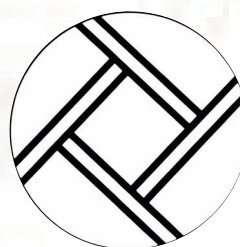

3 second dimension

The **SDG 3** routing system from **GEAT** in action making a table top flute. Time for the set-up process: 1 minute. Advantage: you are not dependant on other manufacturer's inflexible guide rails. In addition, **GEAT - SDG 3** enables you to execute the most unusual routing ideas, and even conical grooves are no longer a problem to rout accurately. You will be able to carry out repetitive steps quickly and it is impossible for the router to run off its path because it is guided from all directions.
