

GEAT tilt protector

Item no.: 0161

Protects the router against tilting by mistake while using a guide bushing.

GEAT drilling & routing setup for special hardware including European hinges.

Item no. 0160

Allows for routing and drilling in one step.

GEAT - SDG 3 is a flexible system for mounting special hardware and making special cut-outs.

It can be used with all routers with guide bushings, and provides for trouble-free and accurate routing of many materials including plastics.

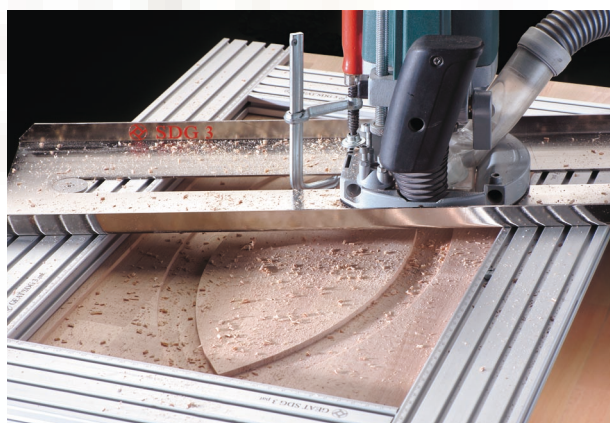

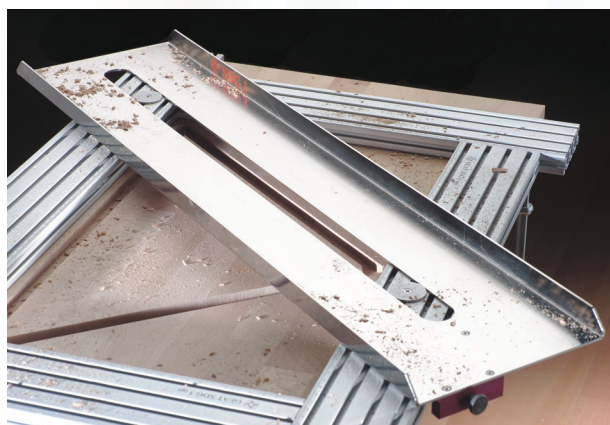

GEAT - SDG 3 is the ideal routing aid when accurate, cost-efficient work is required.

GEAT - SDG 3 is the multi-purpose system for the shop and job site.

A well thought-out and application-oriented accessory system simplifies most routing jobs. Of course, SDG 3 also simplifies working with a jig saw, circular saws, or similar tools.

Using the support carriage, which is available as a further accessory, oval and triangular cut-outs as well as extensive slot and grooves routing are simplified. Once it is mounted, you can work quickly, and accurately guide your router, and duplicate dimensions already set for subsequent steps.

Item no. 0162

GEAT - SDG 3 has been developed with the input of experienced users.

The photos on the right side of this page are some of the applications the system can quickly provide. With our special bar clamps, you can work without disruptive obstacles. The special bar clamps are covered and inserted into the GEAT aluminum rail slots to attach the routing system to your work piece.
